To whom it may concern.

Re:Planet Ark Power.

We recently chose Planet Ark Power for our solar panels project due to their solid engineering background and professional ethic to provide the right solution for us.

They showed great attention to detail and diligence in helping us to decide exactly what system to go with and the best location for the system taking into account existing infrastructure capacity and location that would cause least inconvenience to our operations yet give us maximum output.

Planet Ark Power are monitoring our system 24/7 and will provide us with a performance report every quarter to make sure our system is performing to its optimum. We are also able to use their on line APP to do our monitoring and reporting on the new system and see how we are tracking.

Their approach has been well communicated and professional throughout and engineering design to analysis, logistics and onsite installation and is now being applied to the final commissioning and handover stages of the project.

With a high emphasis on safety management around a school environment the install team worked professionally to meet our expectations with exceptional planning and communications.

We would recommend their services to anyone considering a project.

Thank you

Ross Larson

Finance Manager.
